K-LC One-Click Cleaner Pen (1.25 mm)

One push cleans an LC or MU end face — through the adapter or in your hand — 800+ cleans a pen, no alcohol.

Most failed joints and noisy links trace back to a dirty end face. The K-LC cleans 1.25 mm LC and MU ferrules where they sit: push it into the adapter until it clicks, and a fresh strand of dry microfiber thread sweeps the face clean. One pen is good for more than 800 cleans.

K-LC — 1.25 mm pen, blue body

Key Features

- One push, one clean: press the pen in until it clicks — the tip rotates a half turn while a fresh length of densely woven microfiber thread sweeps the end face, lifting dust, oil and debris without scratching it
- 800+ cleans per pen: the thread advances automatically with every push, so the last clean is wiped with unused thread, exactly like the first
- Dry cleaning — no alcohol to carry, spill or wait on, and no solvent residue left on the end face
- Cleans connectors where they live: through the adapter on the panel, and unmated connectors in the hand; UPC and APC polish
- A window on the body shows the thread remaining, so the pen never runs out mid-job without warning
- Private labeling made to your requirements — your labels, part numbers and barcodes on the inner boxes and outer cartons, ready for your warehouse

Specifications

Ferrule size	1.25 mm
Connectors	LC, MU
Polish types	UPC and APC
Cleans per pen	800+
Cleaning action	One push (one-click); the tip rotates 180° with every push
Cleaning medium	Dry woven microfiber thread — no alcohol or solvents
Cleaning targets	Adapter-mounted and unmated connector end faces
Body	Antistatic resin, with thread-remaining window and lock button
Dimensions	17.5 × 17.5 × 175 mm

Two Views

Pen, retail box and instruction manual

The two sizes: K-LC 1.25 mm and K-SC 2.5 mm

In Use

Fit the guide tip over the connector — or push it into the adapter — and press until it clicks. The tip rotates a half turn as a fresh strand of microfiber thread wipes the end face; the thread then advances on its own. Work through the panel connector by connector, and keep the guide cap on between jobs. When the window shows the thread is finished, replace the pen: it is a consumable, not a tool to refill, and it is never taken apart or reused.

Private Label & OEM

Both pens are supplied in neutral, unbranded stock as standard. Private labeling is made to your requirements — labels with your logo, part numbers and barcodes on the inner boxes and outer cartons, so the goods arrive ready for your warehouse. Custom barcode & contract labeling is applied to every inner box and outer carton to your receiving specification.

In the Box

One K-LC one-click cleaner pen (1.25 mm, blue), in its retail box with instruction manual.
